

Report Period: OCT 19- NOV 1

Summary of Progress in this Period

For this period our team split into 2 teams. One team is working on SV-COMP(C) and IoT libraries. A few errors were discovered when rounding out IoT Libraries and the C team is currently working through those. The second team (Java Team) is currently learning and working through Linear Temporal Logic Formulas. We chose an additional 4 java properties to test and need to create .prp and .ltl files for the model checking.

Pending Issues

Currently we have no pending issues.

Plans for Upcoming Reporting Period

The team will continue to work in teams while also preparing for the faculty panel board presentation for our design project.
